Setting up the Openprovider module for Blesta

Starting from Blesta 5.9, the OpenProvider registrar module has been included with Blesta. [Please see the release notes](#).

Registrar Module Features

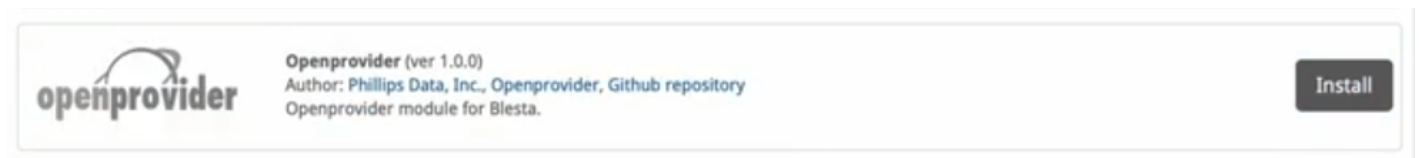

Register	Renew	Transfer	DNS Management	Email Forwarding	ID Protection	EPP Code	Pricing Import	Date Sync
YES	YES	YES	NO	NO	NO	NO	YES	YES

To install the Openprovider registrar module provided with Blesta:

1. Visit **[Packages] > [Domain Options] > [TLDs] > Registrars**.

2. Click the **"Install"** button within the Openprovider module listing.

After installation click on **"Add Account"** to add your Openprovider account.

The module was successfully installed.

Add OpenProvider Account

Basic Settings

Username

Password

☐ Test mode

Add Account

- **Username** - Enter your Openprovider username
- **Password** - Enter your Openprovider password [this should be the regular password, **NOT** password hash]
- **Test Mode** - Leave this option unchecked for production/live environment. Check this box for testing purposes only (when you are using [Openprovider Sandbox environment](#)).

[NOTE] - Ensure you have enabled API access on your account. Please refer to [How to enable API access](#) if API access is not enabled already.
