

How to add a VAT customer field in WHMCS

Question

Some domain registries (e.g. DNS PT, ITNIC) require submitting a VAT number when registering domains under company contact handles. WHMCS doesn't include this data field by default, therefore domain registration may fail with the "**Invalid VAT number**" error.

How to provide a VAT number during domain registration?

Answer

1. Please ensure `openprovider_additional_fields()` function has been correctly configured in the file **resources/domains/additionalfields.php** according to the instructions in [this article](#).
2. If the file `<your WHMCS directory>/resources/domains/additionalfields.php` then add the example version from [GitHub](#).
3. Retry domain registration.
