

How to configure Openprovider HostBill plugin / module for domains, SSL certificates and Plesk licenses?

Question

How to install and configure Openprovider HostBill plugins / modules for various Openprovider products?

Answer

There are 3 modules for core Openprovider products that can be configured separately or all at once:

- [Openprovider plugin for domains](#)
- [Openprovider plugin for SSL certificates](#)
- [Openprovider plugin for Plesk licenses](#)

Openprovider plugin for domains

The Openprovider domain module comes with each HostBill installation.

1. Navigate to HostBill configuration pages (**Settings > Modules**)

2. Find and activate the Openprovider module
3. Search for the related product (TLD) settings and select the newly activated Openprovider App to register this extension with Openprovider

Openprovider plugin for SSL certificates

The module for SSL certificates is included by default in an all-in HostBill license. It can also be bought separately directly from [HostBill](#).

1. Download the module from HostBill license portal
2. Follow steps in the [HostBill knowledge base](#).

Openprovider plugin for Plesk licenses

The module for Plesk licenses is included by default in an all-in HostBill license. It can also be bought separately directly from [HostBill](#).

1. Download the module from HostBill license portal
2. Follow steps in the [HostBill knowledge base](#)
