

How does the price structure work?

Question

How does the price structure work?

Answer

At the moment of purchase of a product, the system will check which price structure is applicable for the reseller.

- In case a [Membership](#) is active and the product is [included](#) in the membership plan, the membership price will be used.
- In case of no active membership or the product is [not included](#) in the membership plan, the general "non-member" price will be used.

A full overview of all the prices of the products can be found and downloaded from [RCP > Prices](#) page.

A quick option to find the current price which is applicable can be found via [RCP > Prices > click on TLD](#).

Please enter the extension and click the button *search* to view the current price details.
If special price conditions apply (like an active membership) it will be showed in the last column.
