

2305, Object association prohibits operation when saving a domain

Symptoms

The following error occurs when trying to save a domain in RCP:

```
An error has occurred, please read the message below:  
Nameserver creation or update failed:  
n1.nameserver.tld, 2305, Object association prohibits operation
```

Cause

Nameserver ns.nameserver.tld doesn't exist in the DNS service.

No data about nameserver.tld is retrieved from WHOIS output nor there is an answer when querying its A record via a DNS lookup utility.

```
dig n1.nameserver.tld  
  
; <<>> DiG 9.9.4-RedHat-9.9.4-38.el7_3.3 <<>> n1.nameserver.tld  
;; global options: +cmd  
;; Got answer:  
;; ->>HEADER<<- opcode: QUERY, status: NXDOMAIN, id: 47410  
;; flags: qr rd ra; QUERY: 1, ANSWER: 0, AUTHORITY: 1, ADDITIONAL: 1
```

Resolution

Make sure third-party nameservers that you are trying to assign to a domain actually exist and resolve publicly.
