

How to approve outgoing domain transfer

Question

An email with the following contents has been received for a number of domain names:

```
Action: outgoing transfer pending
Status: ACT
Order date: 2018-05-23
Activation date: 2018-05-23
Renewal date: 2020-12-10
Expiration date: 2020-12-10
Comments: the transfer has been requested by another registrar
for this domain; if you do not explicitly approve or
reject, the domain will be transferred in 5 days automatically
```

Can an outgoing transfer be forced to complete?

Answer

To complete an outgoing transfer to another registrar:

Via FOA email (for gTLDs)

After an outgoing transfer is started, the registrant (domain owner) will receive a "FOA2" email asking them to confirm or deny the transfer.

Tip: Approving the FOA2 email helps complete your transfer faster.

Via RCP (Reseller Control Panel)

- Navigate to **Domains Overview >> Recent Domain Trades >> [Outgoing transfers](#)** tab in RCP and click on **Approve** in the actions column.

Via API

- ◦ REST API - [ApproveTransfer](#)
- XML API - [approveTransferDomainRequest](#)

If case an outgoing transfer is not processed, please refer to [the article](#) for possible reasons.

Note: Rejecting/declining domain transfers is not possible from registrar end.
