

Domain name is not visible

When adding a domain name to our platform, it's crucial to use the specific domain handler associated with its registration. Using an incorrect or different domain handler might result in an error when attempting to add the domain name.

1. **Select "Add Domain":**

- Locate the "Add Domain" button or option and click on it to initiate the process.

2. **Enter Domain Details:**

- Enter the exact domain name you wish to add. Ensure that the domain handler information matches the one used during the domain's **registration process**.

Domain Handler Importance:

- The domain handler is crucial as it acts as an identifier for the domain's management on our platform.
- Using an incorrect domain handler will lead to an error when attempting to add the domain name.
